

Removable Outfield Fence — Field Sheet

Grünwald Baseballfeld · small-variant arc (80 m to centre)

This dual-use turf field has **no permanent markings**, so the outfield fence is re-placed from scratch each session. The **red curve** is the fence line; the diamond and foul lines orient you, and the five yellow pins are quick anchors. With your phone's GPS and this overlay, one person can walk the line and stand the fence in the same spot every time — no surveying.

Red = fence line to build · yellow = the 5 reference pins · white = diamond & foul lines · black = backstop · blue box = soccer penalty area.

Interactive map

View the overlay in Google My Maps.

Fence file (KML)

Open in Locus Map — import from URL or "open with".

Install Locus Map

Free live-GPS map — iPhone & Android.

Load the fence file into Locus Map

1. Install **Locus Map** (bottom QR → the app store for your phone).
2. **iPhone / any phone:** in Locus Map → menu (≡) → **Import** → **from URL**, and paste the **Fence file** link (scan its QR to copy it).
3. **Android shortcut:** just scan the **Fence file** QR → the file downloads → tap **Open with Locus Map**.
4. Import into a folder (e.g. "Baseball"). The arc, diamond and pins now show on the map.

Walk the line & place the fence

1. Tap the **GPS / centre** button so your dot shows and follows you; wait a moment for the fix to settle.
2. **Check:** stand on home plate (or a foul corner) and confirm your dot sits on that mark.
3. Start at a foul-line **corner** (where the red arc ends). Walk so your dot tracks the **red arc**, dropping a cone/post every ~3 m (one panel). Use the 5 yellow pins for coarse placement first.
4. Stand the fence sections along the walked line.
5. **Verify:** tape-measure home → centre pin ≈ 80 m; nudge as needed.

In Locus Map: your **blue dot** on the overlay lines. Keep it on the arc as you walk; the scale bar (top-left) shows metres.

Arc: apex 80 m on bearing 193.5° (home→2B) · radius 46.6 m · length ~115.5 m · 39 panels @ 3 m · **Home plate:**

48.051415, 11.530371 · **Precision:** a modern phone's GPS is easily good enough for a training fence; for extra precision, anchor the 5 pins by tape from home plate.
